

## MANAGEMENT SYSTEMS POLICIES

We, as Atlas Enerji Üretim A.Ş., strive, in regard to the provision of continuous high quality electric power production, to meet the requirements of all necessary regulations and governing institutions, to conform to the provisions provided under the contracts and agreements, to use all relevant means of communication for the purpose of maintaining the highest levels of satisfaction for all stakeholders and to make use of all communication channels to ensure uninterrupted development and improvement. Our management system principles consist of;

### QUALITY

- To meet the power requirements of our customers in an economic and reliable manner with the highest yield,
- To monitor the system performance and realize uninterrupted improvement in regard to our targets, thanks to our employees' participation, and
- To realize all kinds of operations to generate the highest values on behalf of our customers, society and employees.

### ENVIRONMENT

- To eliminate the contamination at the origin in order to conduct power generation using sustainable and environment friendly technologies,
- Efficient use of natural resources,
- To minimize, eliminate and evaluate the waste by making use of and benefiting from the recovery opportunities,
- To observe necessary measures to prevent the generation of cases that may generate environmental risks.

### WORK HEALTH AND SAFETY

- To generate a safe working environment and observe all necessary measures indicated on risk assessments for the purpose of protecting workers' health and safety,
- To introduce necessary measures for accident-free power generation,
- To be aware of and adopt the principles of workers' health and safety at every stage of our operations.

### LABORATORY SERVICES

- To make use of national and international standards and testing methods in order to ensure customer satisfaction and the highest degree of service in our laboratory services,
- To provide impartial, independent and reliable services in a timely manner by observing good professional and technical procedures with our expert and experienced staff.
- To observe all terms and conditions as mandated under TS EN ISO / IEC 17025 standards, follow all pertinent terms provided under respective policies and references.

### INFORMATION SAFETY

- To ensure the production, processing, communication, sharing, preserving and using corporate information,
- To ensure the safety in regard to the confidentiality, integrity, accessibility and irrefutability,
- To ensure implementing information safety risk assessment process and risk processing in order to establish the relevant risks, in combination with the confidentiality, integrity and accessibility losses within the scope of Information Safety Management System.
- To contribute to the continuity in order to reduce the influences of information safety threats to service durability.
- To develop the information safety implementation abilities of all our managers and employees, and to improve their technical expertise and increase awareness of the imminent damages of the information safety events onto our corporate structure.
